#### **Application**

A round neck transition allows efficient installation when flex duct is used. It is available as a factory mounted option on the diffuser, or as a separate field-installed unit.

#### **Features**

- Round inlet is nominal size minus 1/8" to fit inside the flex duct of the same nominal size.
- Round inlet height is 1-1/4".
- Maximum round inlet size is the same as the square neck size it is fitting onto. For example, a 12" diameter is the largest inlet that will fit on a 12" x 12" square neck diffuser.
